

# Character Reference Letter

To Whom it May Concern,

I have the pleasure and honor of working with Dr. Smith for ten years, whereby I got the opportunity to get to know him at times of various circumstances. This took place, as I served with him at the Veterans Hospital. Besides, I have worked with Dr. Smith on other private ventures, at the same capacity as a Radiologist. Notably, I have been working with Dr. Smith as a diagnostic Radiologist, which facilitates me to refer him.

Dr. Smith is a qualified Radiologist in various fields, such as X-ray radiology, positron emission tomography, ultrasound, nuclear imaging and magnetic resonance imaging. He is good in making diagnoses and consulting with Physicians. He is also kind enough to get involved in the procedure to help in patient preparation and outline further instructions to the technician. He is a qualified Radiologist from a renowned education institute with proven skills as a Radiologist. I should also mention that he is a licensed Radiologist by the American Registry of Radiologic Technologies and has continually maintained the status through furthering his education every two years, since we started working together. Besides the aforementioned qualification, Dr. Smith is a respectable person that knows how to associate with both patients and his colleagues at work. Notably, he is easy to work with, as he upholds integrity. When talking to patients or colleagues, I have to mention that he is able to maintain a professional tone, which proves his serious attitude towards work. Patients have also been on the

forefront to refer to him as kind because of his willingness to help even in situations that are not part of his job description. He has proven to possess good communication skills with patients and the staff, as he speaks in a clear and concise manner. This is coupled with his good writing skills, which depict from the interviews he has carried out with patients regarding their medical history. This is also an advantage to him because he communicates therapeutic techniques and diagnostic positions fluently and upholds a patient's privacy.

I particularly propose the retaining of Dr. Smith, as he has contributed significantly through his thinking skills. He demonstrates thinking skills such as logic, reasoning and judgment. He is excellent at studying medical histories to ascertain whether a treatment makes medical sense or will risk a patient's life. He also has unique consultation skills with physicians, in order to pinpoint proper tests to be administered to patients. Another contribution that Dr. Smith avails for this institution is his physical skills. He is good at working with precision treatment and diagnostic equipment. He is also accurate and fast and ensures patient's safety through assistance. Lastly, he demonstrates excellent clinical skills through the way he operates equipment. He also makes perfect interpretations of outcomes, ranging from resonance imaging to nuclear cardiology treadmill studies. He is also accredited in other crisis conditions, such as diagnosing conditions like arthritis, musculoskeletal radiology and diagnosing trauma.

In summary, Dr. Smith is well respected and conducts himself in a manner above reproach. Besides, he depicts physical, clinical and thinking skills that are relevant in the Radiology department. He is a kind person and will not hesitate to help a patient or his senior. His skills are coupled with a recognizable accreditation in the field of radiology.

Thus, I highly recommend that Dr. Smith should be retained in the organization, as he has been a valuable asset for many years.

In case of any questions, please do not hesitate to contact me.

Sincerely,

Jane M. Thompson R.T. (R)

(Diagnostic Radiology Technology)
